AYNOR OVERPASS TO BE LOCATED IN THE SOUTHERN CORRIDOR

Conway, South Carolina - The Aynor Overpass was identified as a priority project in Horry County's RIDE II penny sales tax program. The project will consist of approximately 2.5 miles of roadway, various intersection improvements and the construction of an overpass bridge at U.S. 501.

In partnership with the South Carolina Department of Transportation (SCDOT), the District 11 Road Oversight Committee has conducted public involvement meetings and gathered data to evaluate potential corridors for the Aynor Overpass Project. Based on the information gathered, it has been determined to move forward with the southern corridor, which is located near the southern town limits of Aynor and encompasses areas adjacent to Webster Road.

RPM Engineers, Inc. has been retained to provide engineering services for the project. These services include project management, environmental documentation, and development of right of way and construction plans. Further evaluation will be conducted to determine a preferred alternative within the southern corridor and public input will be utilized throughout the alternative development phase. Once a preferred alternative has been selected, RPM Engineers Inc. will develop the project for construction bidding.
